

Nancy Czesak, vice president and project executive of Tishman Construction Corp, has overseen major area-projects, including serving as Co-Director on the \$1.2 Billion Expansion of the Jacob Javits Convention Center, Project Executive on the construction of New York City's 8-story, 77,000 square-foot Alvin Ailey New American Dance Center, and Project Executive of Judy and Arthur Zankel Hall, a 688-seat, 41,000-square foot theatre beneath New York City's Carnegie Hall.

While Ms. Czesak's role in these and other large-scale projects includes the day to day supervising of architects, engineers, contractors, and vendors, she also plays an essential administrative role, reviewing projects for possible value engineering options, interfacing with clients and consultants, and running project meetings.

As one of our most accomplished women graduates, receiving both a BA in Architecture and an MS in Construction Management from NJIT, Ms. Czesak is an outstanding example of an alumna who excels in various fields, as she's found success as both an architect and a businesswoman. Often citing the specialized training she received at NJIT as crucial to that success, Ms. Czesak also finds time to serve on the NJIT-Murray Center for Women in Technology's Advisory Board. This has included involvement in several NJIT forums and events – particularly those aimed at encouraging young women students toward opportunities in science and technology careers.
